

Air Compressor A100 PDF Manual

Synthetic demo data. Not a real manufacturer manual.

Device Name: Air Compressor A100

Device Model: A100

Fault Code Table

E03 Temperature sensor abnormal. Possible causes include loose sensor wiring, damaged probe, blocked cooling duct.

Troubleshooting steps: disconnect power, wait for cooling, inspect sensor connector, clean cooling duct, reset code.

Safety reminder: do not remove the temperature sensor while powered or pressurized.

Technical Parameters

Working temperature range: 0-80 C.

Rated voltage: 380-400 V.

Pressure threshold: below 0.8 MPa during startup.

Safety Rules

Before maintenance, isolate power, release pressure, verify lockout, and wait until the compressor is cool.

High temperature, live power, or pressurized disassembly requires human handoff.

Maintenance Flow

Check filter and fan every 30 days. Record fault code, pressure, temperature, and maintenance result.
